# Register Roam Miner on Roam App

Step 1:

Download the Roam App and set up your account.

Step 2:

On the Home screen, tap 'Finish setup' to start installing the OpenRoaming profile.

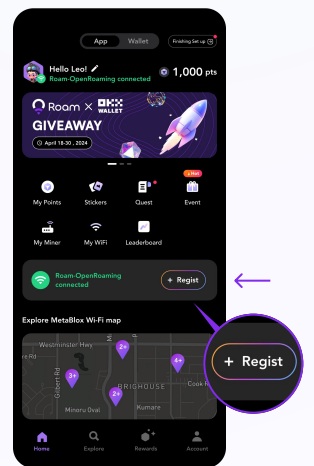

Step 3:

Tap 'Continue' to complete setting up your OpenRoaming profile.

Step 4:

Your device will automatically connect to 'Roam-OpenRoaming' WiFi, then open the app and tap 'Register'

Step 5:
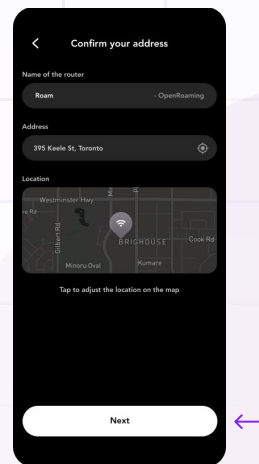

Tap 'Scan to Register'.

Step 6:

Hold the camera frame over the QR code located at the back of the miner, or manually input the serial number (SN).

Step 7:

Fill out required information and then tap 'Next'.

Step 8:

Tap 'Done' to complete the registration.

Roam Rainier MAX60 Setup Instruction

Initial Setup

Follow the below instructions to set up your miner:

Step 1:

Connect one end of the Ethernet cable provided in the box to the WAN port present at the back of the miner.

Step 2:

Power up your miner by plugging the power cord to the router and power supply.

Step 3:

Wait for the indicator light on the miner to change from red to white, indicating successful activation.

Step 4:

Connect your miner to your computer using the Ethernet cable provided. You can use any of the 4 Ethernet ports on the miner.

Step 5:

Open your web browser and enter **192.168.1.1** into the address bar.

Step 6:

Log into the miner configuration portal by using the username 'admin' and password located on the back of the miner.

Step 7:

Change your miner configuration portal password by clicking 'System' tab, then 'User' > 'Change' > 'Password'. The username 'admin' is not changeable.
* Changing your Admin Panel password is recommended for security purposes.

Step 8:

To change the hostname of your network, click 'System' > 'System'. Then press 'Save & Apply'. Changing your hostname is optional.

# Changing Your Miner's Network Names (SSIDs)

Your miner will provide three separate WiFi networks:

'Roam-Free', **'Roam-xxxxxx'** and **'Roam-OpenRoaming'**. 'Roam-Free' is an open network that becomes available to other users only when you enable it through the miner configuration portal. 'Roam-xxxxxx' is a private WiFi network created for personal use, allowing you to set up a password for added security. 'Roam-OpenRoaming' is the OpenRoaming compatible network designed for mining.

Follow the below instructions to change your miner's network SSIDs and WiFi password:
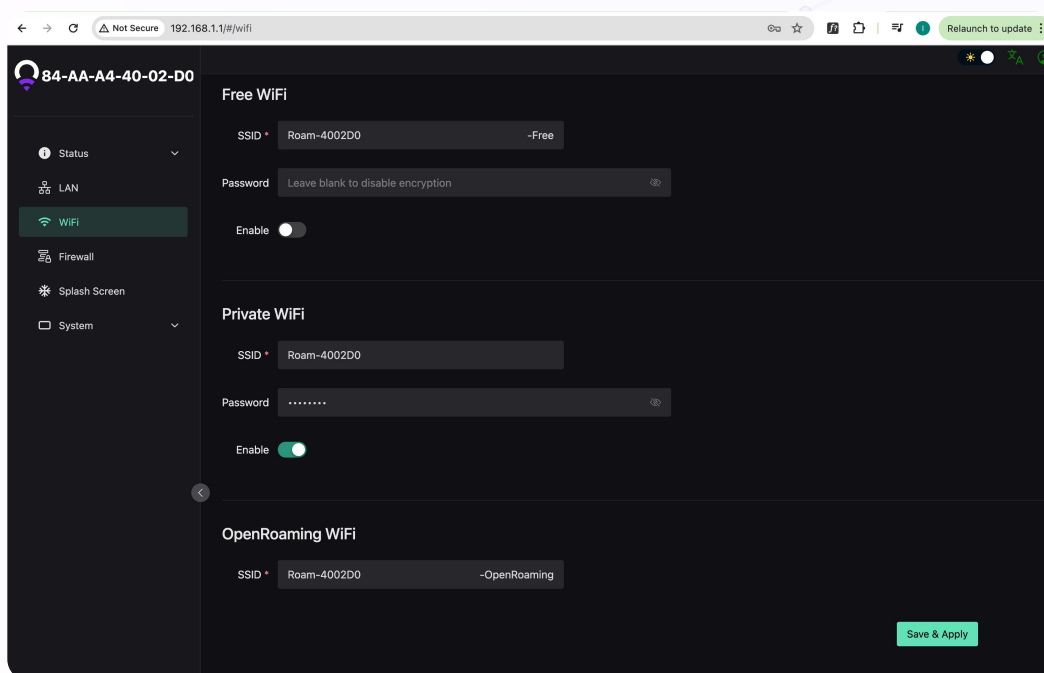

Step 1:

Complete the 'Initial Setup' using instructions provided in steps 1 to 6 to log into your miner's configuration portal.

Step 2:

Click the 'WiFi' tab. You'll see 3 setup menus for the different networks provided by your miner. Corresponding to the network types, their default SSIDs will be 'Roam-Free', 'Roam-xxxxxx', and 'Roam-OpenRoaming'.

Step 3:

You can change the network SSID and password here then click on the 'Save & Apply'.

* Changing your Admin Panel password is recommended for security purposes.

Customizing Your WiFi Splash Screen

'Roam-Free' is an open network that can be accessed via a splash screen menu upon initial connection. This landing page can be customized with your preferred image.

For users connecting to 'Roam-Free' provided by your miner, they will be presented with a splash screen upon initial connection.

Follow the below instructions to customize the image and link presented to users on this page:

Step 1:

Follow the 'Initial Setup' instructions provided in steps 1 to 6 to log into your miner's configuration portal.

Step 2:

Click Splash Screen'.

Step 3:

Upload the banner image and the link presented on your network's splash screen. Click 'Save & Apply'.
